

**Cloud should
create value
not just cost.**

Spend smarter. Stay in control.

ANFAA turns cloud spend into a continuous FinOps operating discipline.

C-9INE PRODUCT STORY

THE PROBLEM

Cloud spend grows faster than financial control.

As cloud usage spreads across teams and providers, seeing cost is not the same as understanding, owning or optimising it.

01

Fragmented spend

Costs are spread across teams, projects, services and cloud providers.

02

Unclear ownership

Finance and engineering often lack a shared view of who owns what.

03

Optimisation comes late

Waste is found after the bill grows instead of during everyday operations.

04

Multi-cloud complexity

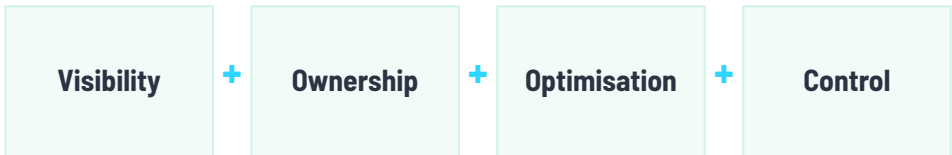

Different billing models and tooling make control harder as choice expands.

The issue is not cloud growth. It is financial control.

THE BELIEF

Every unit of cloud spend should have a clear purpose.

ANFAA connects usage, accountability, governance and optimisation so FinOps becomes part of the cloud operating model - not a finance exercise after the fact.

Cost optimisation should be continuous - not a quarterly clean-up.

The value of FinOps comes from turning cost data into an everyday discipline shared by finance, engineering and business owners.

HOW IT WORKS

From cloud spend data to governed FinOps action.

A repeatable path that turns usage and billing data into ownership, optimisation and financial governance.

01

Discover

Bring together the cloud cost and usage data that matters.

02

Allocate

Map spend to teams, products, environments and accountable owners.

03

Optimise & Orchestrate

Identify waste, rightsizing opportunities and actions that improve value.

04

Govern

Use budgets, guardrails and FinOps practices to sustain control.

See it. Own it. Optimise it. Govern it.

THE OPERATING LOOP

Discover. Allocate. Optimise. Govern.

ANFAA is positioned around the continuous FinOps cycle organisations need to understand spend, improve value and keep cloud growth under control.

**DISCOVER**

bring cloud cost and usage into view

ALLOCATE

connect spend to owners and outcomes

OPTIMISE & ORCHESTRATE

turn insight into better cloud decisions

GOVERN

make FinOps an ongoing operating discipline

WHAT IT GOVERNS

One financial operating model across cloud.

C-9INE uses ANFAA to bring consistency to the FinOps capabilities that become harder to manage as cloud estates and providers grow.

Cost visibility

clearer view of where cloud spend is going

Ownership & allocation

map spend to teams, products and environments

Budgets & guardrails

control spend before it drifts too far

Anomaly awareness

surface unusual cost patterns sooner

Optimisation insight

support rightsizing and smarter usage decisions

Multi-cloud FinOps

apply a common financial discipline across providers

Consistency is what makes multi-cloud FinOps scalable.

CUSTOMER OUTCOMES

From cloud bill to cloud value.

The goal is not another dashboard. The goal is a repeatable way to manage cloud economics with clear ownership and continuous action.

1

Better spend visibility

understand where cloud cost is going

2

Clearer accountability

connect spend to teams and owners

3

Faster optimisation & orchestration

act on waste and opportunities sooner

4

Stronger budgeting

bring guardrails into everyday cloud decisions

5

Multi-cloud control

expand provider choice without losing financial discipline

Understand it. Optimise it. Govern it.

Spend smarter. Govern continuously. Stay in control.

A multi-cloud FinOps product designed to help organisations understand spend, improve accountability and optimise cloud value continuously.

- Clearer cloud cost visibility and ownership
- Continuous, fully orchestrated optimisation built into the operating model.
- Budgets, guardrails and stronger FinOps governance
- A common financial discipline for multi-cloud growth
