

Cloud foundations shouldn't slow innovation down.

Build faster. Standardise once. Scale with confidence.

aSaaS turns cloud standards into a repeatable product experience.

C-9INE PRODUCT STORY

THE PROBLEM

Cloud foundations are rebuilt too often.

Most cloud programmes lose time before workload delivery even starts. The same foundations are repeatedly designed, reviewed and manually assembled.

01

Slow start

Landing zones and controls become long design projects.

02

Inconsistent patterns

Different teams create different structures, names and guardrails.

03

Manual effort

Specialists are pulled into repetitive setup work.

04

Hard to scale

Every new environment feels like another bespoke build.

The issue is not cloud ambition. It is repeatability.

THE BELIEF

Infrastructure should be easy to consume.

aSaaS captures approved cloud standards once, then turns them into a guided and repeatable delivery experience for teams who need cloud without becoming cloud specialists.

Technology should make speed and control easier to achieve - not harder to balance.

The product experience matters because customers do not want another complex cloud build. They want a controlled path from intent to working foundation.

HOW IT WORKS

From business input to governed cloud foundation.

A guided path that translates requirements into repeatable cloud infrastructure delivery.

**Guided input. Repeatable configuration.
Automated delivery. Governed handover.**

THE OPERATING LOOP

Build. Deploy. Monitor. Optimise.

aSaaS is positioned around the cycle that customers actually need to operate and improve cloud foundations over time.

BUILD

create consistent foundations

DEPLOY

release through repeatable automation

MONITOR

make visibility part of the platform

OPTIMIZE

improve continuously over time

WHAT WE STANDARDISE

The foundations every cloud programme depends on.

C-9INE uses aSaaS to industrialise the patterns that are too important to rebuild manually each time.

Standardisation is what makes cloud adoption scalable.

CUSTOMER OUTCOMES

From cloud project to cloud factory.

The goal is not one successful environment. The goal is a repeatable way to build many of them with control.

1

Faster time to value

less time spent assembling foundations

2

More consistency

approved patterns reused across teams

3

Lower configuration risk

less manual drift and fewer setup errors

4

Better scalability

the next environment is easier than the last

5

Less dependence on scarce skills

broader teams can consume cloud confidently

Build once. Reuse everywhere.

Build once. Standardise. Reuse. Scale.

A guided product experience for delivering cloud foundations faster, more consistently and with stronger control.

- Guided flow that is easier to consume
- Reusable automation and infrastructure patterns
- Built to support consistency, governance and scale
- Part of the wider C-9INE cloud engineering approach
